

Introducing the IPA Certification Program

Ingenuity Systems is offering a new on-line course for users wishing to receive in-depth training in the Ingenuity Pathways Analysis application. The certification program provides a structured curriculum that guides users in using the basic, as well as advanced, features of IPA. This training also gives users a detailed understanding of the algorithms and mechanics behind IPA. Upon successful completion of the six-week course, users become officially certified in IPA.

The IPA certification program is designed for any IPA user who wants to become an expert in using the application. The training can be especially useful for graduate students, post-docs, and junior faculty members for career development purposes. It can also be useful for IPA users who may be instructing other people in how to use IPA such as microarray core facility directors and staff.

The requirements to become an IPA certified analyst include attending each of the three IPA on-line training sessions (or viewing the corresponding recordings), six 30-minute IPA sessions, and completion of an examination at the end of the course. After the exam has been scored, users who pass will be sent a certificate of completion from Ingenuity Systems.

For more information on the IPA Certification Program or to enroll, please contact Customer Support at support@ingenuity.com.
