

## INGENUITY PRODUCTS AND SERVICES: Single Sign-On Integration (SSO)

### Overview

Ingenuity Systems is pleased to offer the Ingenuity Single Sign-On (SSO) Integration package to IPA. This SSO Integration enables Ingenuity Pathways Analysis (IPA) users at enterprise accounts to log into IPA while being authenticated through their existing enterprise identity infrastructure.

### Benefits

**Optimized user experience:** IPA users do not need to remember a unique username and password for their IPA account thus avoiding lost password and username issues.

**Speed of access:** First-time IPA access for users within an account occurs without the need to register.

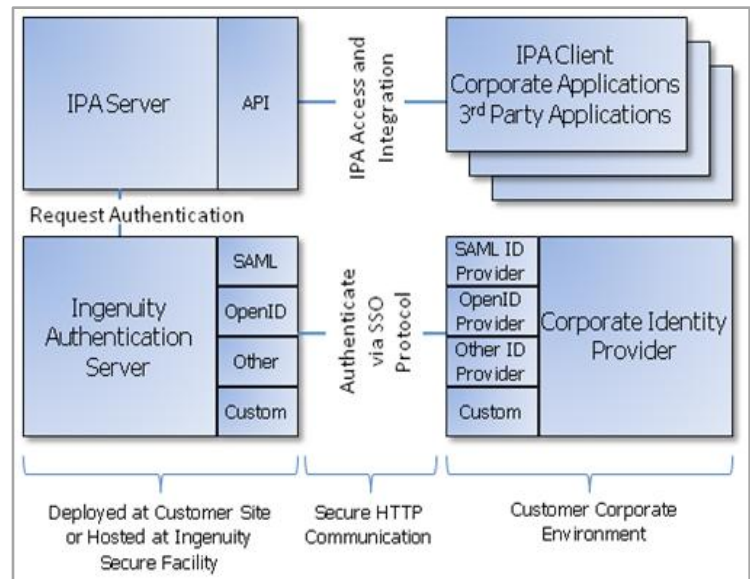

**Improved ability to integrate IPA:** Organizations leveraging the IPA APIs do not need individual users to register or manually log in when invoking an API.

**Provides enhanced security:** Organizations can manage access to their IPA accounts through their existing identify and access infrastructure.

Ingenuity SSO Integrations can be implemented with a wide range of SSO protocols including SAML, OpenID, Oracle Access Manager (OAM), as well as some customer-specific protocols. The highly configurable Ingenuity Authentication Server (IAS) presents a constant interface to IPA, allowing SSO integration independent of IPA releases, even for custom SSO protocols.

### Contact

For more information regarding the Ingenuity SSO Integration packages and to request a quote for your specific technical configuration, please contact your Ingenuity Account Executive or email [sales@ingenuity.com](mailto:sales@ingenuity.com).
